

# Nuclear safety

Nuclear safety is at the heart of our business. Day in, day out, we work on protecting the public, the environment and our employees. Together with our partners and external employees, we actively promote the Nuclear Safety Policy.

The Nuclear Safety Policy is based on three pillars:

## **NUCLEAR SAFETY = OUR TOP PRIORITY!**

- We identify any nuclear safety risks in good time, and control them properly.
- Our objective is a culture that takes safety very seriously.
- We proactively monitor the development of new laws and guidelines concerning nuclear safety, implement them in good time, and strictly comply with them.

## **NUCLEAR SAFETY = A PROCESS OF CONTINUOUS IMPROVEMENT**

- We continuously learn from internal and external experience management and take action where necessary.
- We define nuclear safety improvement plans, and implement them professionally.
- We continuously learn lessons from experience of internal and external management, and take action where necessary.
- We actively involve all our staff in this process of continuous improvement.

## **NUCLEAR SAFETY = STRICT CONTROLS**

- We continuously measure the effectiveness of our nuclear safety policy.
- We organise internal and external independent audits, and take action based on their recommendations.
- We conduct a permanent dialogue with governments, safety authorities, and other stakeholders.
